1.0 INTRODUCTION

1.1 GENERAL DESCRIPTION

1.1 GENERAL DESCRIPTION continued

This panel is used to acquire and display depth and tension data from a wireline logging winch unit. The panel provides the operator a means to set and make adjustments to the data as necessary. Depth is displayed from data provided from an encoder mounted on a measuring device. The tension data is provided by a load pin and is also passed through to the acquisition system. The panel will operate with the BenchMark Dual Wheel Measuring Devices for slick line, braided line, and cased hole e-line services.

The system consists of two main components, the real time acquisition board and the PC. The acquisition board provides power to and processes the signals from the encoders, load pin, and magnetic mark detector. This board operates independent from the PC and is instantly on when power is applied.

The PC uses an Intel based high speed processor running MS Windows XP embedded. The PC includes a color touch screen for operator input and command entry. The PC is Ethernet ready for connection to the internet for remote display and control.

1.2 ATEX STANDARDS & REQUIREMENTS

PRODUCT SUMMARY

The AMS4A099 Panel is used to acquire and display depth and tension data from a wireline logging winch unit and panel provides the operator a means to set and make adjustments to the data as necessary.

PRODUCT CERTIFICATION & CODING

II 3 G Ex nR II T6 T_{amb} -20°C to +40°C

INSTALLATION INSTRUCTIONS

Warnings:

- The apparatus is ATEX CAT3, only to be installed in Hazardous Area Zones 2.
- The installer is to ensure that the equipment is located in areas that are known not to have an adverse affect on the housing material.
- Do not modify the enclosure as this will compromise the apparatus certificate.

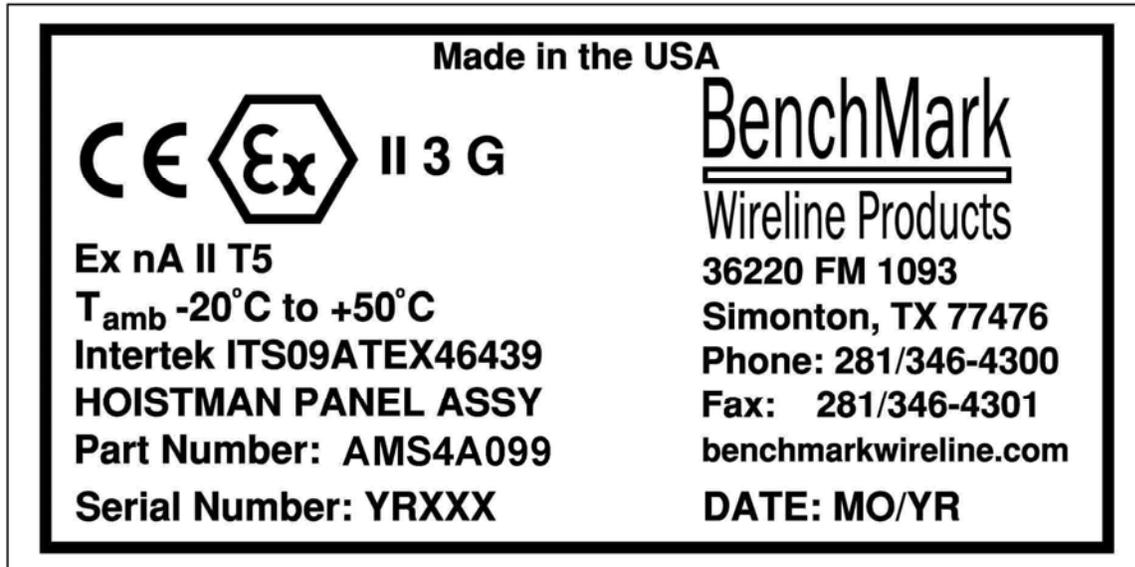

Hazardous Area Installation Standards & Requirements:

The installer should refer to the latest edition of the following standards before operating in a Hazardous Area:

- | | |
|--------------------|--|
| EN 1127-1 | Explosive Atmospheres - Explosion prevention and protection, basic concepts and methodology. |
| EN 60079-14 | Electrical apparatus for explosive gas atmospheres
Part 14:Electrical installations in hazardous areas (other than mines) |
| EN 60079-17 | Electrical apparatus for explosive gas atmospheres –
Part 17:Inspection and maintenance of electrical installations in hazardous areas (other than mines) |

- | | |
|---|------------------------|
| <u>Hazardous Area Preparation & Installation</u> | - Refer to section 1.7 |
| <u>Operational Parameters</u> | - Refer to Section 3.0 |
| <u>Maintenance</u> | - Refer to Section 6.0 |

ATEX Label Details and Information

The following standards have been applied in the certification of this device:

EN60079-0:2006 – Electrical apparatus for explosive gas atmospheres – Part 0: General requirements

EN60079-15:2005 – Electrical apparatus for explosive gas atmospheres – Part 15: Construction, test and marking of type of protection “n” electrical apparatus.

1.3 TYPE EXAMINATION CERTIFICATES

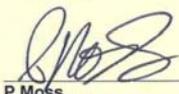

1. **TYPE EXAMINATION CERTIFICATE**
2. **Equipment or Protective System Intended for use in Potentially Explosive Atmospheres**
3. Type Examination Certificate Number: **ITS09ATEX46439**
4. Equipment or Protective System: **AMS4A090/ AMS4A095/ AMS4A099 Slickline Hoistman's Touch Screen Panel**
5. Manufacturer: **BenchMark Wireline Products**
6. Address: **BenchMark Wireline Products, 36220 FM 1093, Simonton, Texas 77476, USA.**
7. This equipment or protective system and any acceptable variation thereto is specified in the schedule to this certificate and the documents therein referred to.
8. Intertek Testing and Certification Limited certifies that this equipment or protective system has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of equipment and protective systems intended for use in potentially explosive atmospheres given in Annex II to the Directive 94/9/EC of 23 March 1994

The examination and test results are recorded in confidential Report: 09039450A1, dated August 2009.
9. Compliance with the Essential Health and Safety Requirements has been assured by compliance with standards EN60079-0:2006 and EN60079-15:2005 except in respect of those requirements referred to at item 16 of the Schedule.
10. If the sign "X" is placed after the certificate number, it indicates that the equipment or protective system is subject to special conditions for safe use specified in the schedule to this certificate.
11. This Type examination certificate relates only to the design, examination and tests of the specified equipment or protective system in accordance to the directive 94/9/EC. Further requirements of the Directive apply to the manufacturing process and supply of this equipment or protective system. These are not covered by this certificate.
12. The marking of the equipment or protective system shall include the following:-

13. Description of Equipment or Protective System

The AMS4A095 and AMS4A099 Slickline Hoistman's Touch Screen Panel is an interface panel used to acquire, display and transmit tool depth and tension data from a wireline logging winch unit. The panel provides the operator a means to set and make adjustments to the data as necessary.

The AMS4A090 Rig Floor Display Panel is an interface panel used to provide a remote display of logging tool depth, line speed, surface tension, and down hole tension. It is typically placed on the rig floor to provide this information to the driller to monitor this information in real time.

The AMS4A090, AMS4A095 and AMS4A099 share the same enclosure but have different numbers of I/O's. The enclosure measures approximately 275mm x 230mm x 120mm.

14. Report NUMBER

Intertek Report Ref 09039450, dated August 2009.

15. CONDITIONS OF CERTIFICATION:

- a. Special Conditions for safe use

There are no special conditions for safe use.

- b. Conditions For Use (Routine Tests)

There are no conditions for safe use

16. Essential Health and Safety Requirements (EhsR's)

The relevant EHSR's that have not been addressed by the standards listed in this certificate have been identified and assessed in Intertek Report Ref 09041646, dated August 2009.

AUTHORIZATION TO MARK

This authorizes the application of the Certification Mark(s) shown below to the models described in the Product(s) Covered section when made in accordance with the conditions set forth in the Certification Agreement and Listing Report. This authorization also applies to multiple listee model(s) identified on the correlation page of the Listing Report.

This document is the property of Intertek Testing Services and is not transferable. The certification mark(s) may be applied only at the location of the Party Authorized To Apply Mark.

Authorized by: _____

for Thomas J. Patterson, Certification Manager

This document supersedes all previous Authorizations to Mark for the noted Report Number.

This Authorization to Mark is for the exclusive use of Intertek's Client and is provided pursuant to the Certification agreement between Intertek and its Client. Intertek's responsibility and liability are limited to the terms and conditions of the agreement. Intertek assumes no liability to any party, other than to the Client in accordance with the agreement, for any loss, expense or damage occasioned by the use of this Authorization to Mark. Only the Client is authorized to permit copying or distribution of this Authorization to Mark and then only in its entirety. Use of Intertek's Certification mark is restricted to the conditions laid out in the agreement and in this Authorization to Mark. Any further use of the Intertek name for the sale or advertisement of the tested material, product or service must first be approved in writing by Intertek. Initial Factory Assessments and Follow up Services are for the purpose of assuring appropriate usage of the Certification mark in accordance with the agreement, they are not for the purposes of production quality control and do not relieve the Client of their obligations in this respect.

1.5 HARDWARE FEATURES

12 - 24 VDC Power Input

Internal PC board

- Intel based personal computer board
- 4 gb solid state media device
- Embedded windows XP operating system
- Four USB ports (One inside, two in front, and one on brake-out box)
- 1 RS232 port
- RJ 45 Ethernet port
- USB Mouse / Keyboard included

Color Display

- TFT LCD
- Backlit
- 400 NITS Sunlight readable

Touch Screen Interface (replaces current key pad)

- 5 wire resistive
- USB interface

Real Time Acquisition board

- Kerr Measurement Systems proprietary design
- 8051 Microprocessor based
- Provides power to encoders, load cell
- Processes encoder quadrature, load cell
- Runs independent of PC board

Overtension Relay Contact Closure output

Analog output interface

- Encoder quadrature output
- 0 – 10vdc tension output
- 4-20ma tension output

Dual Pressure signal inputs

1.6 USER INTERFACE FEATURES

Total Tension numeric graphic
Incremental or Differential tension meter graphic
Meter reset button graphic (touch screen control)

Over_tension Warnings and Shutdown settings for both Differential and Total Tension readings (touch screen activated)

Tension Calibration Setup Window (touch screen control)

Encoder Resolution Settings (PPR value set by touch screen control)

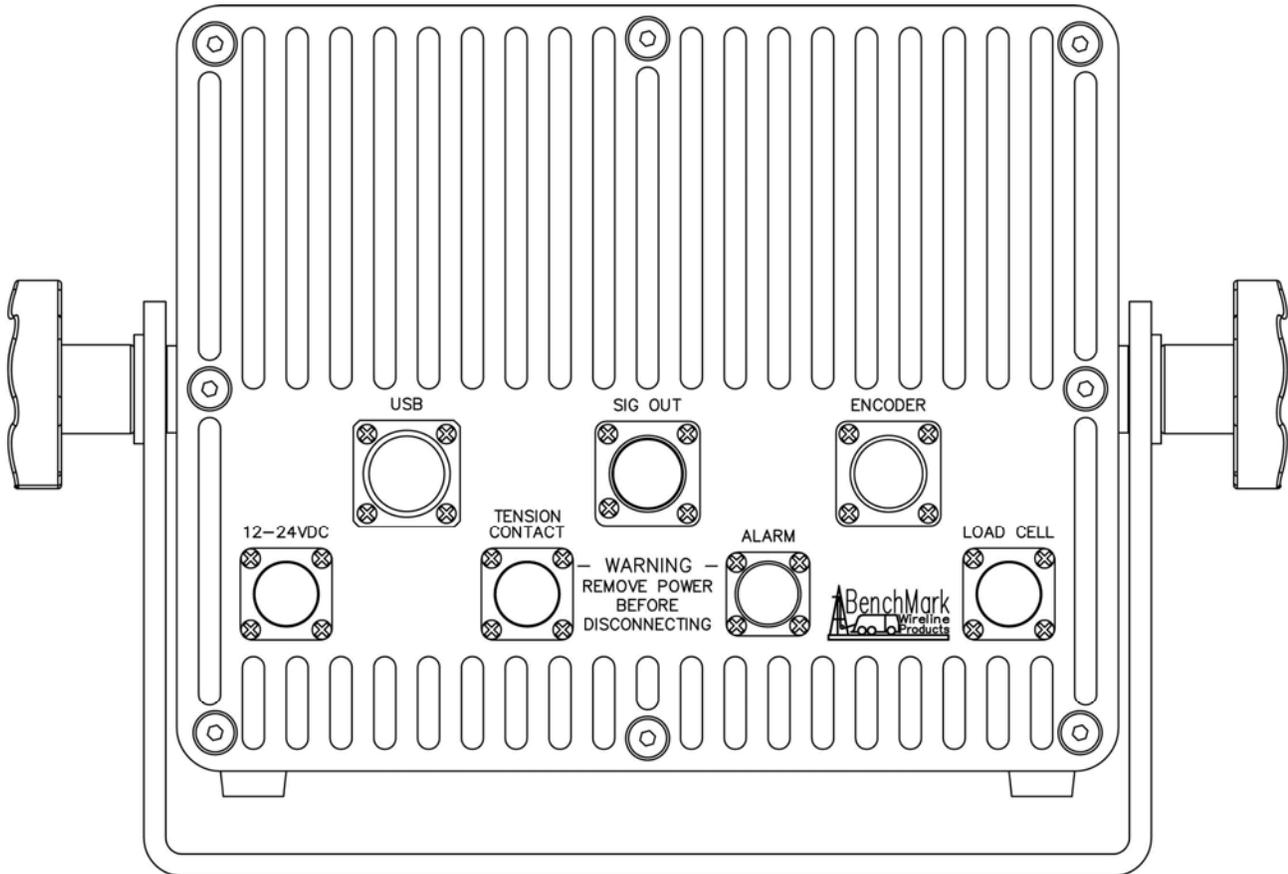

Approaching Surface

Max Depth

Set Down

CONNECT INPUT POWER AND SIGNAL CABLES

Connect the cables from the measuring head to the **LOAD CELL** and **ENCODER** connectors on the box.

1.8 OBTAINING TECHNICAL ASSISTANCE

Call BenchMark Wireline Products Inc. at +1 281 346 4300

Or contact by email mail@benchmarkwireline.com

Or fax in request at +1 281 346 4301

Information is also available on website www.benchmarkwireline.com

Parts can be ordered by email, phone, or fax

Equipment can be returned for repair and maintenance. Please notify us by

Phone, email, or fax before sending any equipment.

To return equipment to BenchMark, ship it to:

Simonton, Texas 77476

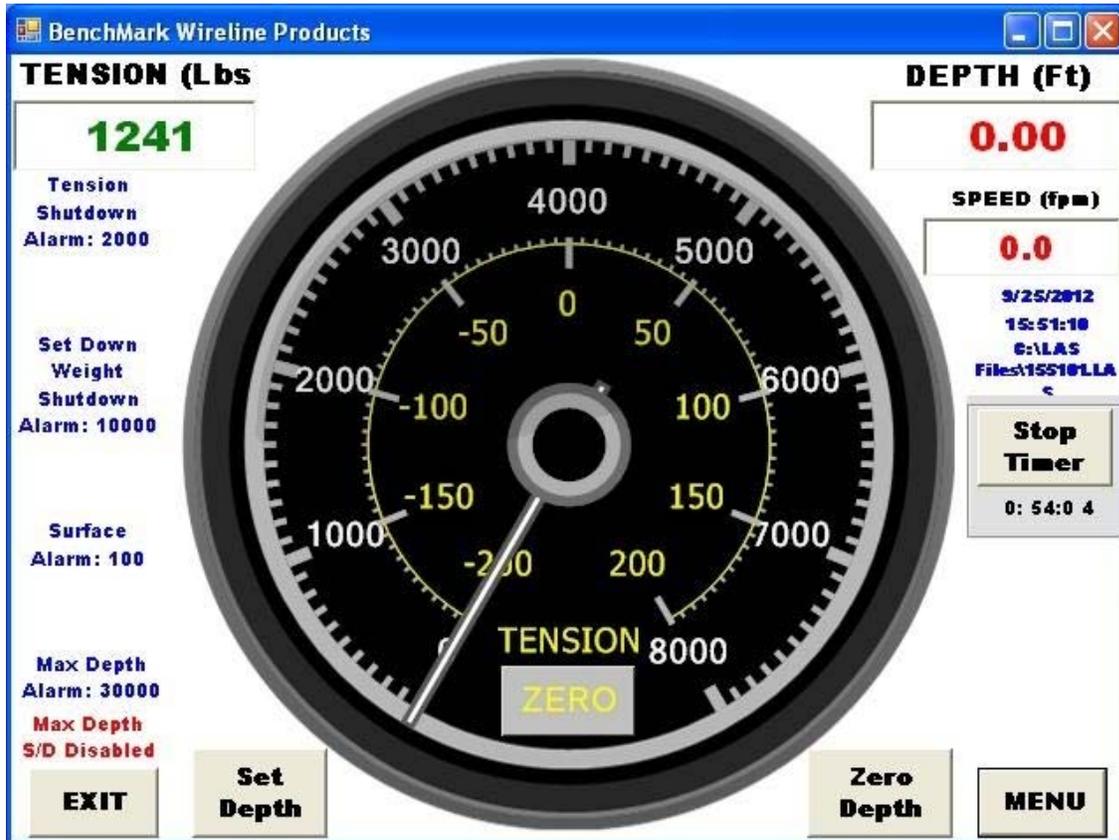

U.S.A.

2.0 WELLSITE OPERATING SUMMARY

- 2.1 Power up panel and verify it is working properly.
 - 2.2 Press Zero Depth and verify that panel tension reads 0. Verify tension is recorded on acquisition system.
 - 2.3 Set line size to match cable size installed in head (refer to section 3).
 - 2.4 Set Tension Alarm value (refer to section 3).
 - 2.5 Set depth adjust value (refer to section 3).
 - 2.6 Install cable in measuring head and lay it slack on the ground.
 - 2.7 Press Zero Inc. Tension to zero the tension value.
 - 2.8 Press T-Cal and verify that panel tension reads 5000 lbs. Verify tension is being properly recorded on acquisition system.
 - 2.9 Pull tool to depth 0 position. Press D-Zero and verify that panel depth reads 0. Set acquisition system depth to 0 at this time.
- Make sure encoder direction is properly set.

3.0 SOFTWARE OPERATING INSTRUCTIONS

When the system first boots up, the main screen will appear.

Most of the commands are accessed through the buttons across the bottom of the screen.

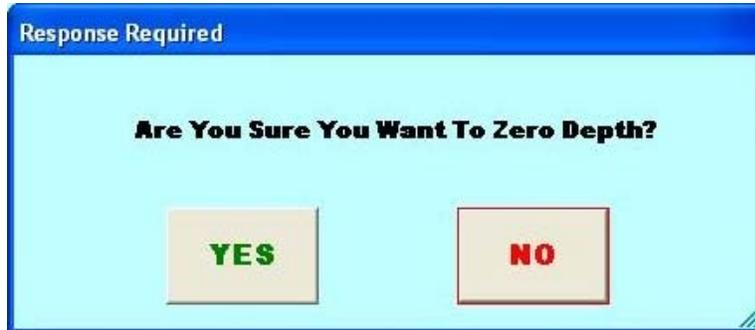

EXIT BUTTON - Exits this program and returns to MS Windows

MENU BUTTON - Invokes a new screen with additional menu options (refer to section 3.1)

ZERO BUTTON - Resets Incremental Tension bar graph to zero

SET DEPTH – Allows operator to set the depth of the tool string

ZERO DEPTH – This button will invoke the following screen.

When the YES button is pressed, the depth value will be set to ZERO.
If NO is pressed, the depth value will remain at the current value.

3.1 MENU

Setup Menu				
Line Size	Head Type	Head Other Parameters	Depth Adjust	SET DEPTH
Encoder In PPR	Encoder Direction	HYD_SL Head Parameters	Alarms	ZERO DEPTH
Start Job	Stretch Correction	Tension Factor	Tension Cal	TENSION S/D
End Job	Pressure 1	Pressure 2	Tension Scales	Pulses Out
Eng/Met Units	Restore Defaults	Summary	HELP	Encoder Out PPF
Start Time LogPlot	Start Depth LogPlot			EXIT

Following are the functional descriptions of each of the buttons

3.1.1 HEAD TYPE

If the “Other” head is chosen, the operator has the option of choosing a variety of wheel sizes listed in 3.1.3.

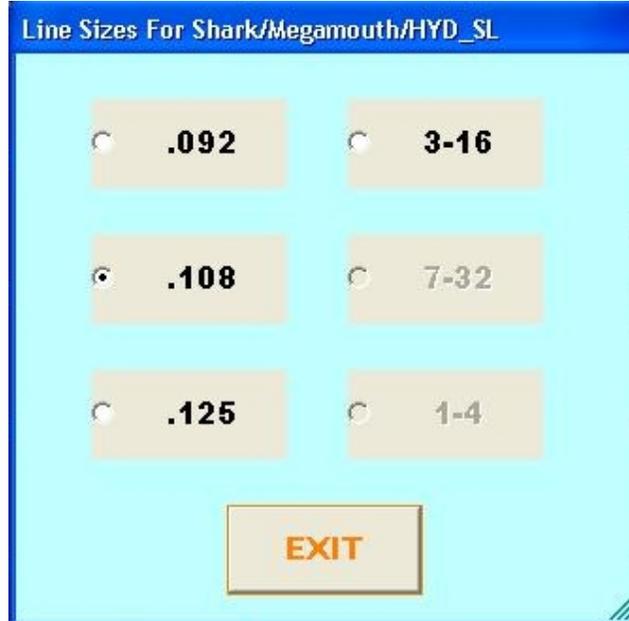

If the “HYD_SL” head is chosen, the operator has the option of choosing from two different wheel sizes listed in 3.1.3.

For all other head selections, the wheel sizes are automatically determined and cannot be changed. The load pin types are also automatically determined by the head selection.

NOTE – it is recommended to check the Line Size AFTER changing Head Types.

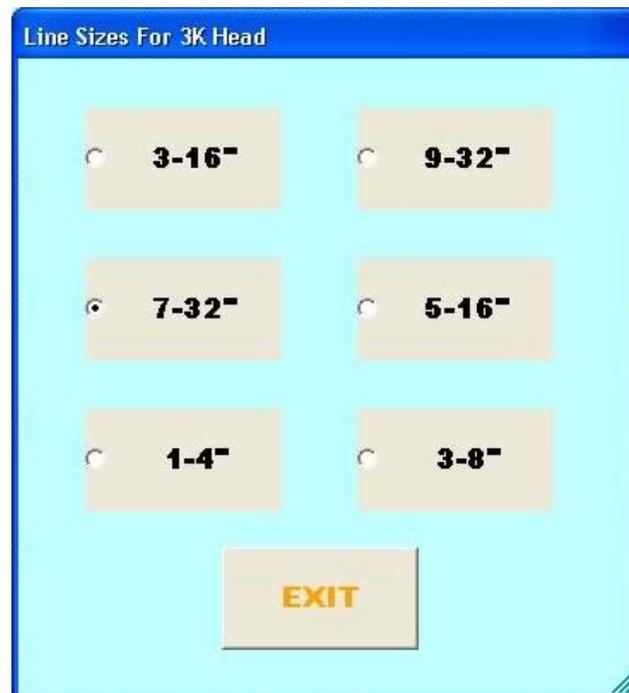

3.1.2 LINE SIZE

SHARK / MEGAMOUTH / HYD_SL

Select the line size by pressing the corresponding gray box. Default is .108

3K

20" Mako

Line Sizes For Mako Head

<input type="radio"/> .092	<input type="radio"/> .150	<input type="radio"/> 1-4
<input checked="" type="radio"/> .108	<input type="radio"/> .160	<input type="radio"/> 9-32
<input type="radio"/> .125	<input type="radio"/> 3-16	<input type="radio"/> 5-16
<input type="radio"/> .140	<input type="radio"/> 7-32	EXIT

Select the line size by pressing the corresponding gray box. Default is .108

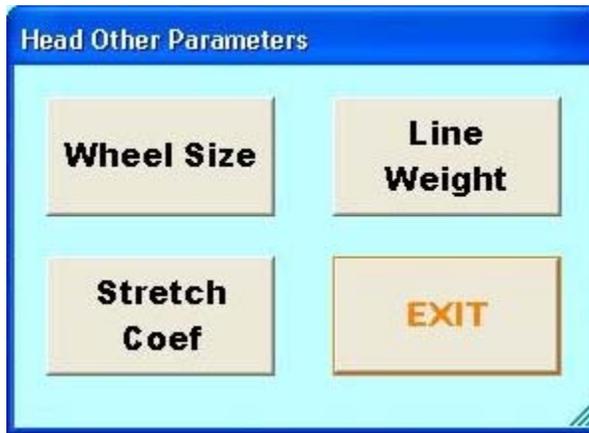

5K (Braided Line):

Line Sizes For 5K Head

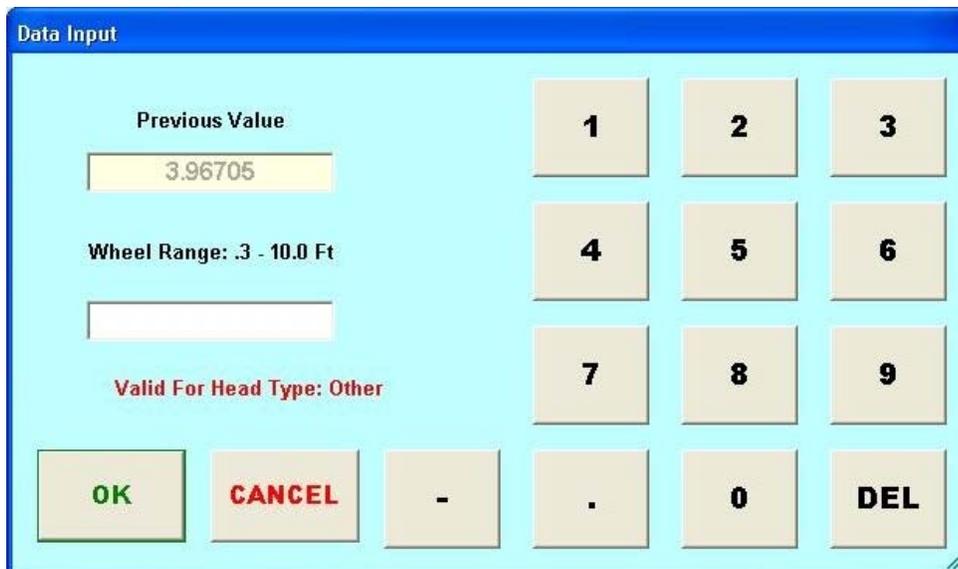

<input type="radio"/> 3/16	<input checked="" type="radio"/> 5/16	<input type="radio"/> .472
<input type="radio"/> 7/32	<input type="radio"/> 3/8	<input type="radio"/> .484
<input type="radio"/> 1/4	<input type="radio"/> 7/16	<input type="radio"/> .492
<input type="radio"/> 9/32	<input type="radio"/> 15/32	EXIT

Select the line size by pressing the corresponding gray box. Default is 5/16

3.1.3 HEAD OTHER PARAMS

WHEEL SIZE (OTHER)

This setting allows you to change the size of the depth measuring wheel that is used to measure depth. To use a different measuring head from the Benchmark head, this setting will need to be changed to match the wheel size of the new head.

3.1.4 DEPTH ADJUST

Data Input

Previous Value
0.00

Set Depth Adjust Shim
[Empty Field]

Range: -99.00 - 99.00 ft/Kft

OK CANCEL - . 0 DEL

The Set Depth Adjust Shim entry screen will appear.
The range is -99 to 99 ft/Kft

Shim

Adds or subtracts depth continually.

If 1 is entered then 1 foot or 1 meter will be added every 1000 feet or 1000 meters.

If -.2 is entered then .2 feet or .2 meters will be subtracted every 1000 feet or 1000 meters.

Default is 0.0

3.1.5 ENCODER PPR

The screenshot shows a 'Data Input' window with a light blue background. On the left, there is a 'Previous Value' field containing '1200' and a 'Set Encoder PPR (1-2000)' field which is currently empty. To the right of these fields is a numeric keypad with buttons for digits 1-9, 0, a decimal point, and a delete key (DEL). At the bottom left of the keypad area are buttons for 'OK' (green text), 'CANCEL' (red text), and a minus sign (-). The keypad also includes buttons for a hyphen/underscore (-), a period/underscore (.), and the digit 0.

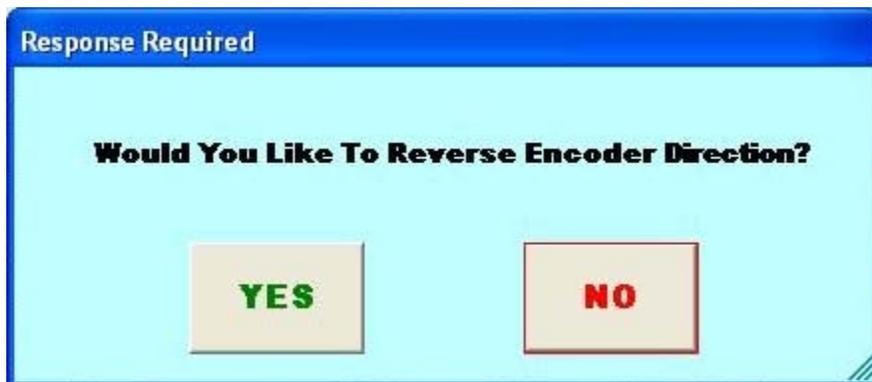

The range is 1-2000

The screen allows you to set the encoder pulses per revolution setting. This number should be printed on the encoder label.

Note: The pulses per foot/meter are not set by this screen, only the encoder input. Pulses per foot/meter are calculated from encoder PPR and Wheel Size.

Default is 1200 PPR

3.1.6 ENCODER DIRECTION

This screen allows you to change the direction of the encoder. If the depth is changing in the opposite direction to which the line is moving, this option can be used to correct it. On a dual wheel measuring device with two encoders, the encoder on one of the wheels will turn in the opposite direction from the other. If you change encoders, this feature can be used to change the encoder direction.

3.1.7 STRETCH CORRECTION

Enabling this allows stretch correction to automatically be applied to the depth. The correction is calculated using line size and mud cable coef. parameters

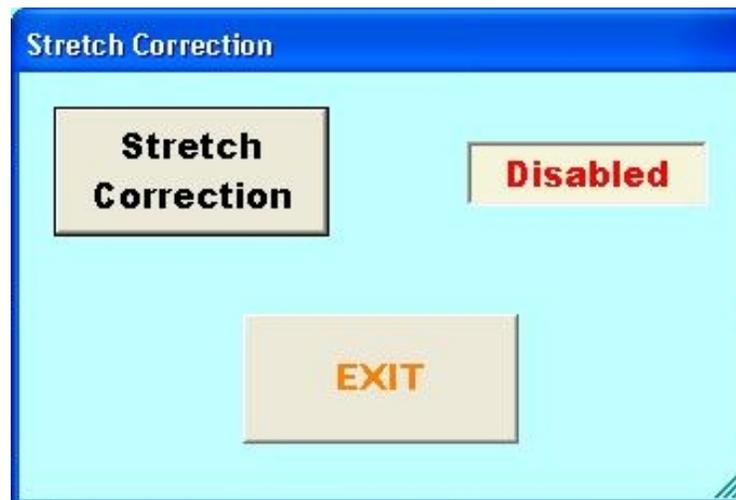

Stretch is calculated by stretch due to cable weight + stretch due to weight at end of cable

stretch due to cable weight = stretch coefficient * depth * cable weight / 2

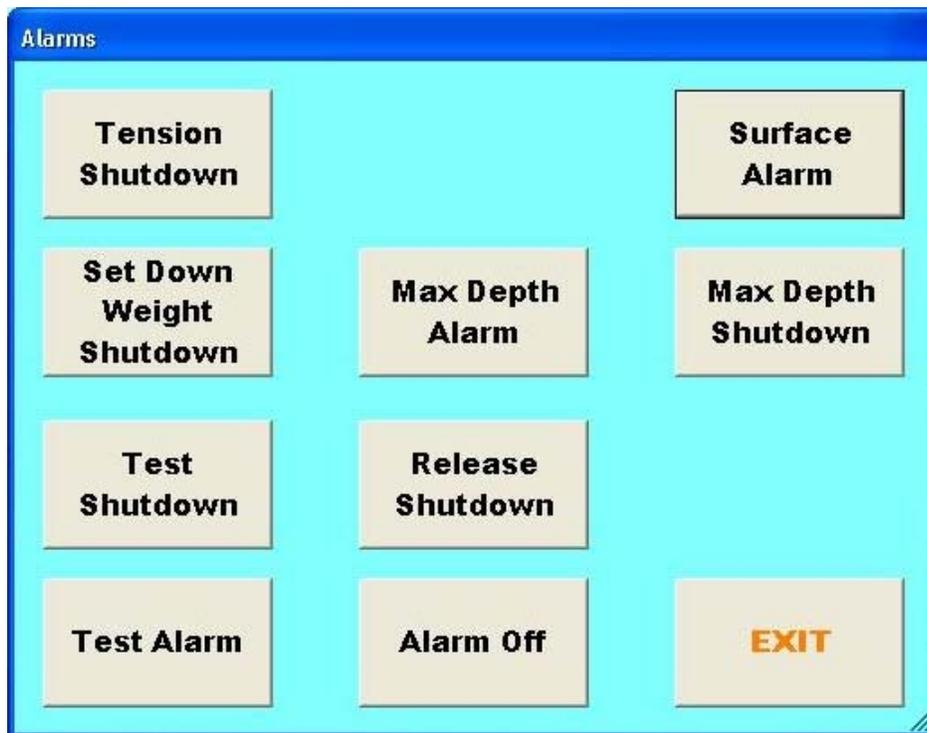

stretch due to weight at end of cable = stretch coefficient * depth * (tension – cable weight)

When tension is less than cable weight, tension measured is due to cable weight alone.

Default is: disabled.

3.1.8 ALARMS

Tension Shutdown: refer to 3.1.8.1

Max Depth Alarm: refer to 3.1.8.2

Surface Alarm: refer to 3.1.8.3

Set Down Weight Shutdown: refer to 3.1.8.4

Max Depth Shutdown: refer to 3.1.8.5

Test Shutdown: refer to 3.1.8.6

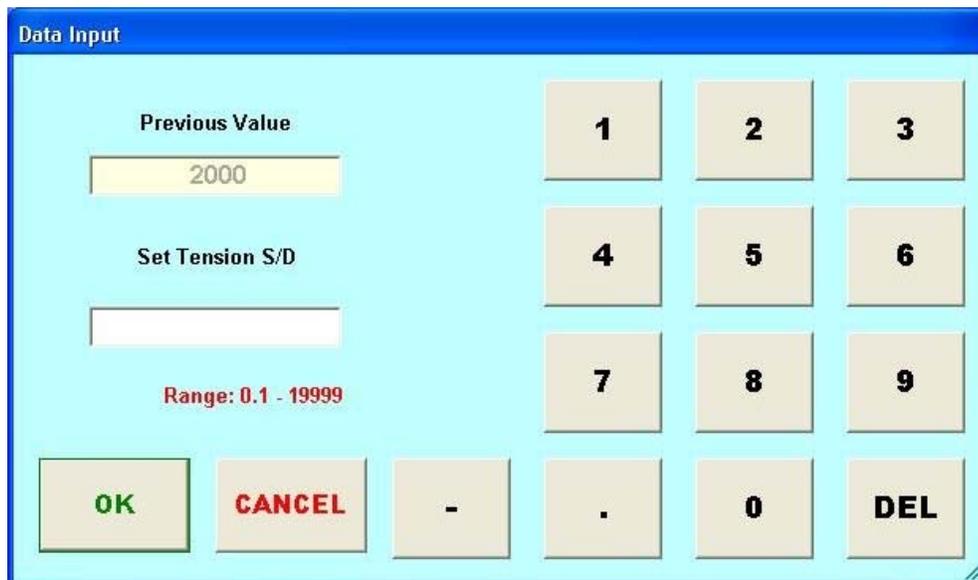

Release Shutdown: refer to 3.1.8.7

Test Alarm: refer to 3.1.8.8

Alarm Off: refer to 3.1.8.9

Note: All shutdowns refer to the relay contact closure. It is the operator's responsibility to connect the relay contacts to the actual reel shutdown mechanism.

3.1.8.1 TENSION SHUTDOWN

Data Input

Previous Value
2000

Set Tension S/D
[Input Field]

Range: 0.1 - 19999

OK CANCEL - . 0 DEL

The Set Tension S/D entry screen will appear. The range is 0.1 to 19999

When this value is reached, alarm sounds, tension display flashes value, and tension contact closure switch is closed. This can be used to provide a signal to automatically stop the winch.

Each wireline size will have a corresponding Tension Alarm setting. Only the setting for the cable size selected can be adjusted.
Default is 2000 lbs

NOTE – Tension shutdown is also accessible from the Setup Menu.

3.1.8.2 MAX DEPTH ALARM

Data Input

Previous Value
30000

Set Max Depth Alarm
[Empty Input Field]

Range: Surface Alarm - 30000 Ft

1 2 3
 4 5 6
 7 8 9
 OK CANCEL - . 0 DEL

The Set Max Depth Alarm entry screen (refer to section 3.1.3) will appear. The range is from the surface alarm setting to 30,000 feet.

Allows you to enter in the maximum depth desired. If the tool goes below that depth then an alarm will sound. If max depth shutdown is enabled, then the relay will close (refer to section 3.1.7.5).
 Default: 30,000 ft.

3.1.8.3 SURFACE ALARM

Data Input

Previous Value

100

Set Surface Alarm

Range: 0 - 999 Ft

1 2 3
 4 5 6
 7 8 9
 OK CANCEL - . 0 DEL

The Set Surface Alarm entry screen (refer to section 3.1.3) will appear. The range is 0-304 Mt or 0 to 999 ft.

When this depth value is reached, the alarm will sound warning the operator that you are approaching the surface. Default value is 100 feet.

3.1.8.4 SET DOWN WEIGHT SHUTDOWN

Data Input

Previous Value

750

Set Down Weight S/D

Range: 0.1 - 5000

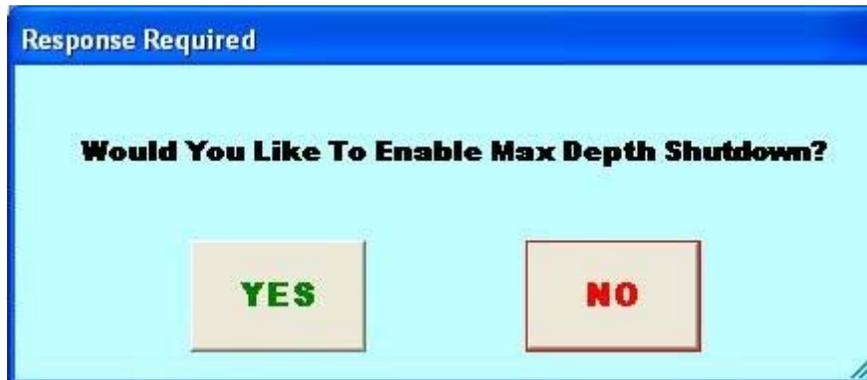

OK CANCEL - . 0 DEL

The Set Down Weight S/D entry screen will appear (refer to section 3.1.3). The range is 0.1 to 5000

This function is similar to a differential tension shutdown except that it only activates when the value is exceeded. This will occur when tension decreases rapidly in a negative direction.

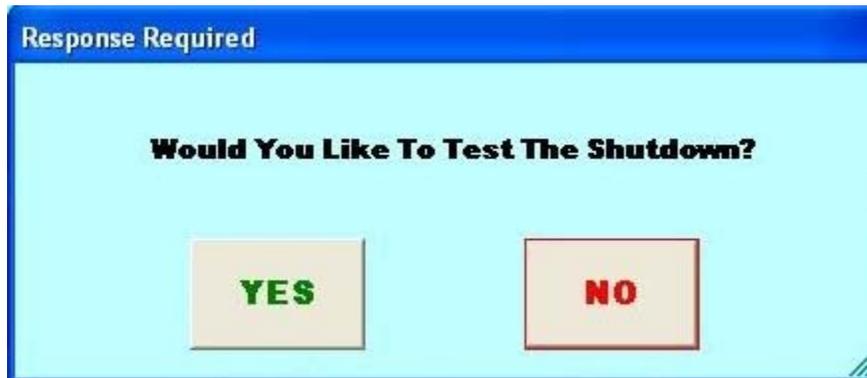

When this event occurs the shutdown relay will close.
 Default: 750

3.1.8.5 MAX DEPTH SHUTDOWN

If enabled, the relay will close and the winch will stop when the maximum depth value is reached. The maximum depth value is set on the max depth alarm screen (refer to section 3.1.8.2).
Default: disabled

3.1.8.6 TEST SHUTDOWN

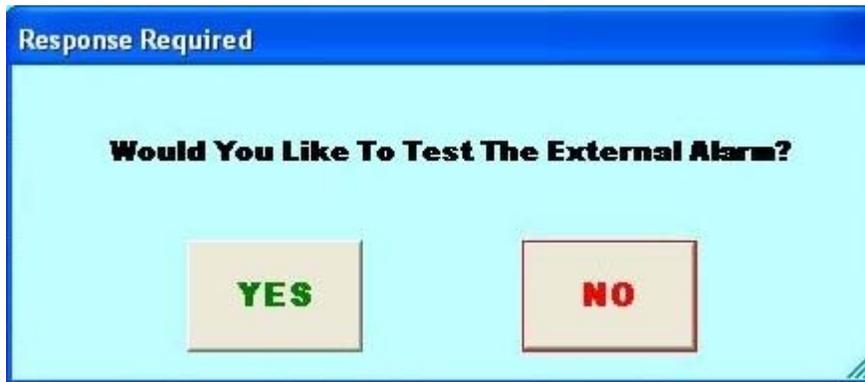

When this button is pressed, the contact closure pins are shorted. This can be used to test the winch shutdown mechanism or any other mechanism that uses these contacts.

3.1.8.7 RELEASE SHUTDOWN

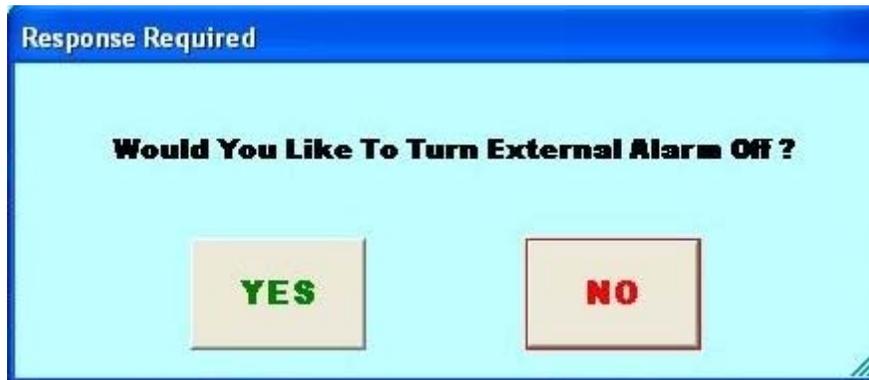

When this button is pressed, the contact closure pins (A and B) on J8 are open.

3.1.8.8 TEST ALARM

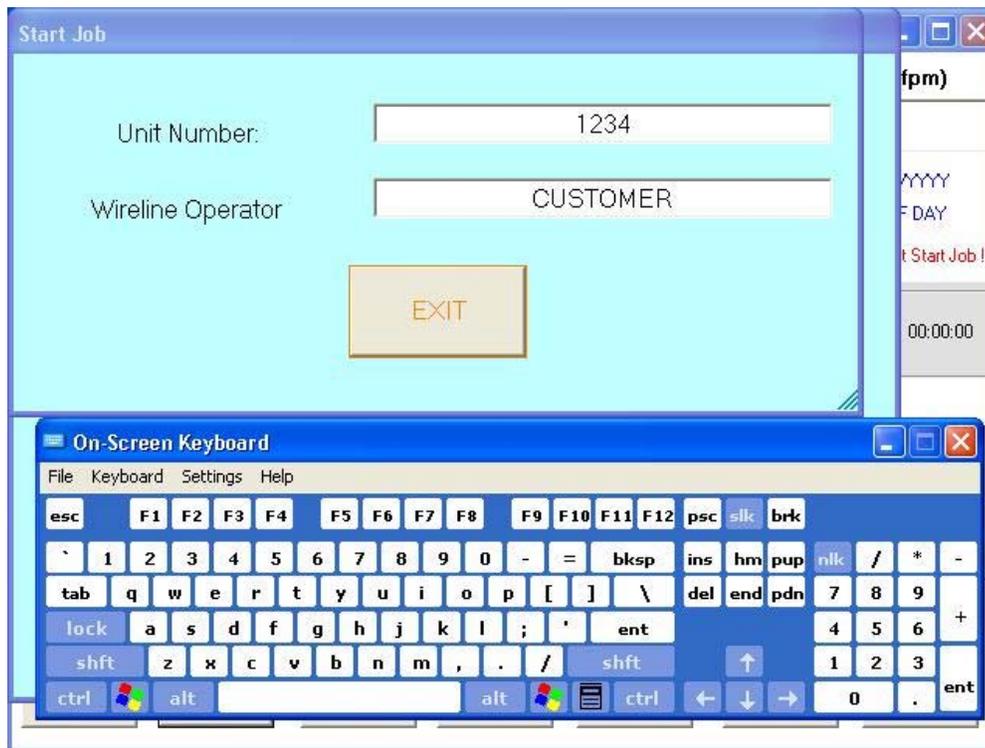

NOTE - There is no internal alarm in the panel and this function is intended for an optional external alarm.

3.1.8.9 ALARM OFF

NOTE - There is no internal alarm in the panel and this function is intended for an optional external alarm.

3.1.9 START JOB

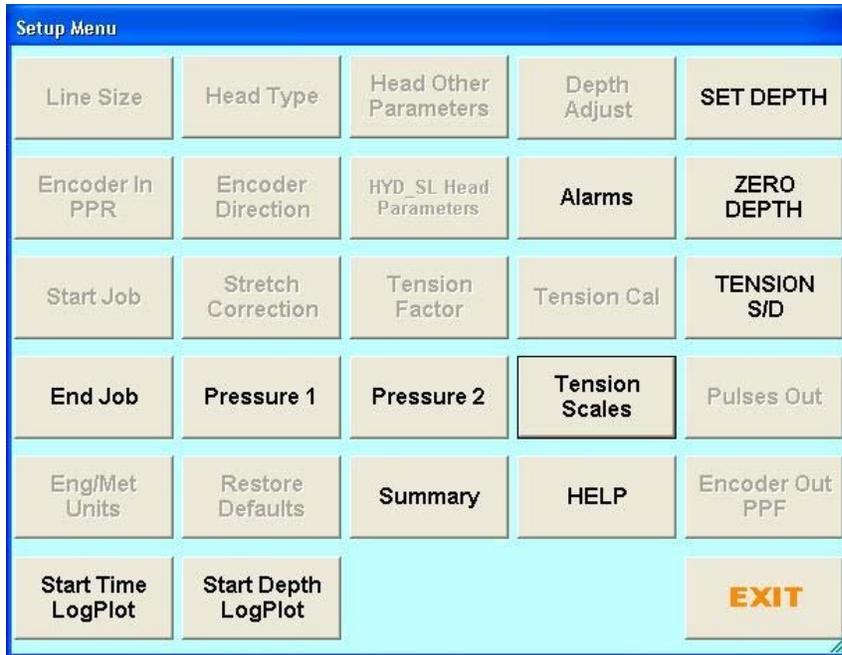

An on-screen keyboard is provided automatically for data entry.

Upon closing of the dialog screen a LAS file is created using the time stamp as the name of the file. This file name is displayed on the screen. If job is not started the screen will show no file – must start job!

Note: No LAS file is created until the operator chooses 'start job.'

3.1.9 START JOB continued

NOTE - Many buttons are disabled after a "Job Start" to discourage changing parameters during a job.

3.1.10 END JOB

If the response is “Yes” then the LAS file is closed. The button “Start Job” is enabled once again and all buttons in the Setup Menu are re-enabled.

3.1.11 TENSION FACTOR

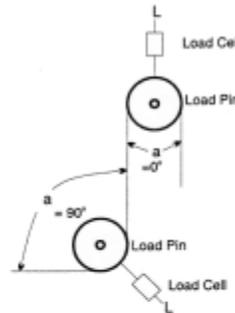

The Set Tension Factor entry screen will appear. The range is 0.5-2.0 degrees. Default is 1.0.

Explanation: Tension Factor as it relates to Load Cell angle

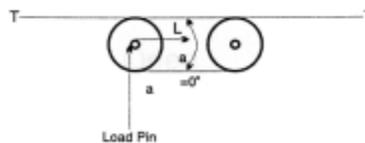

Load cell angle is used to compensate when a load cell is not hung vertically (i.e. bottom sheave). Enter the value derived from the formula:

$$= \frac{1}{\text{Cosine} \left(\frac{\text{Angle}}{2} \right)}$$

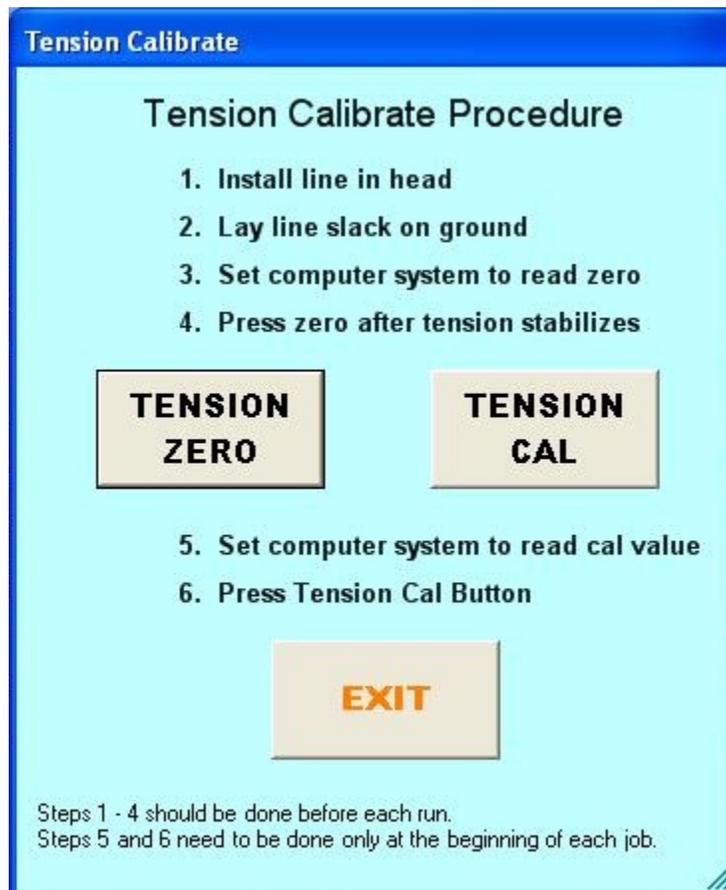

Example 1: Load Cell/Load Pin located at Wireline Lower and Upper Sheave

- Examples:
- 30 degrees = 1.035
 - 45 degrees = 1.082
 - 90 degrees = 1.414
 - 120 degrees = 2.0

Example 2: Combination two wheel counter at wireline unit

3.1.12 TENSION CAL

NOTE - Depth value must be zeroed before this menu can be displayed.

NOTE - Tension value must be less than 1,000 lbs before this menu is displayed.

3.1.12.1 TENSION ZERO

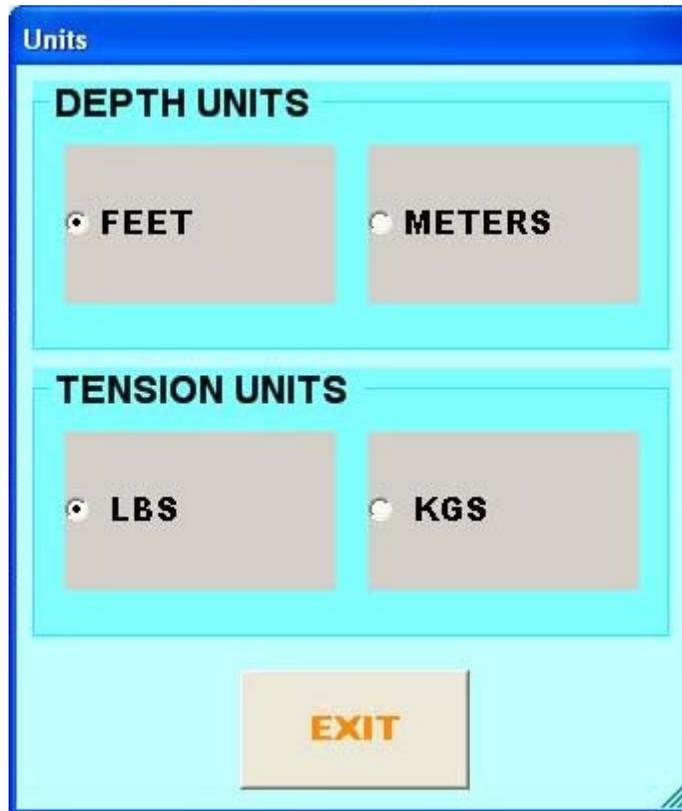

Pressing Tension Zero will null out any tension offset voltage up to 200 lbs (slickline head) or 1000 AM5K braided line head.

3.1.12.2 TENSION CAL

Pressing Tension Cal will activate the tension relay inside the panel. The load pin should then return a calibrated signal that varies depending on the head chosen.

3.1.13 ENG/MET UNITS

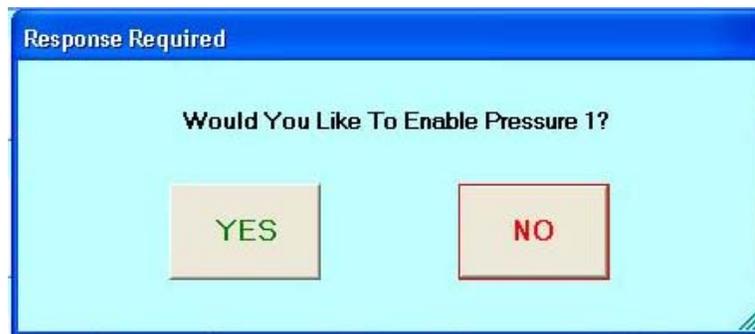

This menu allows you to select the display units for either depth or tension. Default is feet and lbs.

3.1.14 PRESSURE 1

This menu controls pressure 1 values and displays.

3.1.14.1 ENABLE / DISABLE PRESSURE 1

When Pressure 1 and/or Pressure 2 are enabled, the main screen will display these values. Once disabled these values will be removed from the main screen

3.1.14.2 ZERO

Zero - Pressing this button establishes the zero pressure point. This corresponds with 4ma point or a 4-20ma current loop.

This menu allows the user to zero out the information in Pressure 1

3.1.14.3 NAME

Enter Pressure 1 Name

Pressure 1 Name:

EXIT

This screen provides a way to enter a descriptive name for the pressure data (i.e. tubing pressure Well 12345)

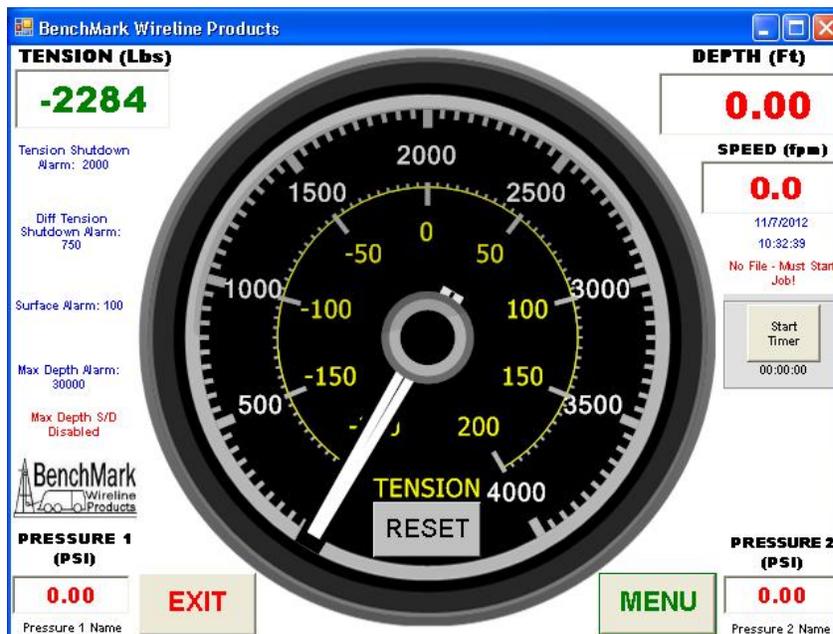

3.1.14.4 FULLSCALE

The screenshot shows a 'Data Input' window with a light blue background. At the top left, it says 'Data Input'. Below that, there is a label 'Previous Value' above a yellow input field containing '10000'. To the right of this field is a numeric keypad with buttons for 1, 2, 3, 4, 5, 6, 7, 8, 9, 0, and a DEL key. Below the 'Previous Value' field is another label 'Set Fullscale PSI (1-10000)' above an empty white input field. Below this field, the text '20 ma = Fullscale' is displayed in red. At the bottom left, there are three buttons: 'OK' (green text), 'CANCEL' (red text), and a '-' button. The rest of the keypad (0, ., DEL) is at the bottom right.

The menu adjusts the settings for Fullscale PSI. The range is 1-10000, and the default setting is 10000

Fullscale - This value corresponds with the 20ma point of a 4-20ma current loop.

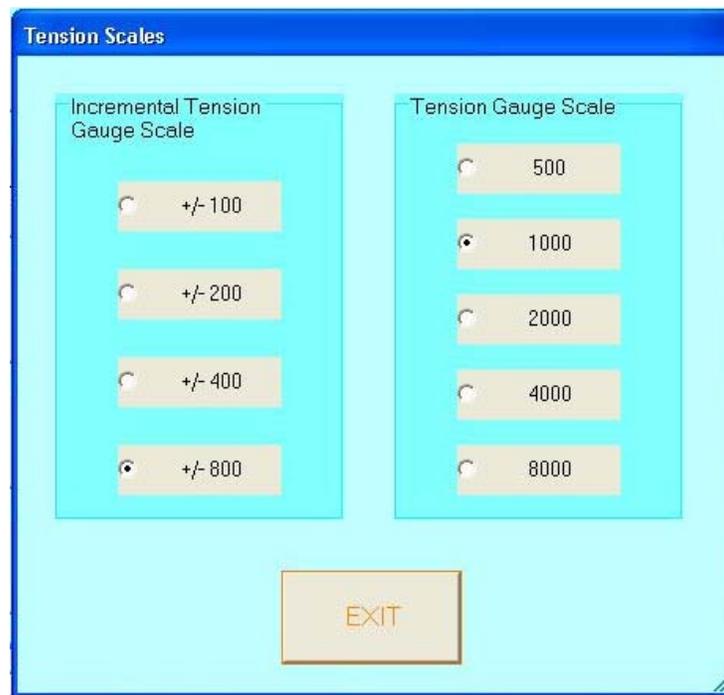

3.1.15 PRESSURE 2

The settings menus for Pressure 2 are identical to Pressure 1. (See sections 3.1.14.1, through 3.1.14.4 for more information.)

NOTE - The main screen image above shows both pressures enabled.

3.1.16 TENSION SCALE

The Tension Scale Screen allows the changing of both Bar Meter Scale near the top and the Needle Gauge Scale at the center of the screen. It also allows the Gauge Scale to be used either in a Differential or Incremental scale.

Incremental tension provides a high resolution tension scale. It must be periodically reset as tension increases or decreases to keep it from "pegging out".

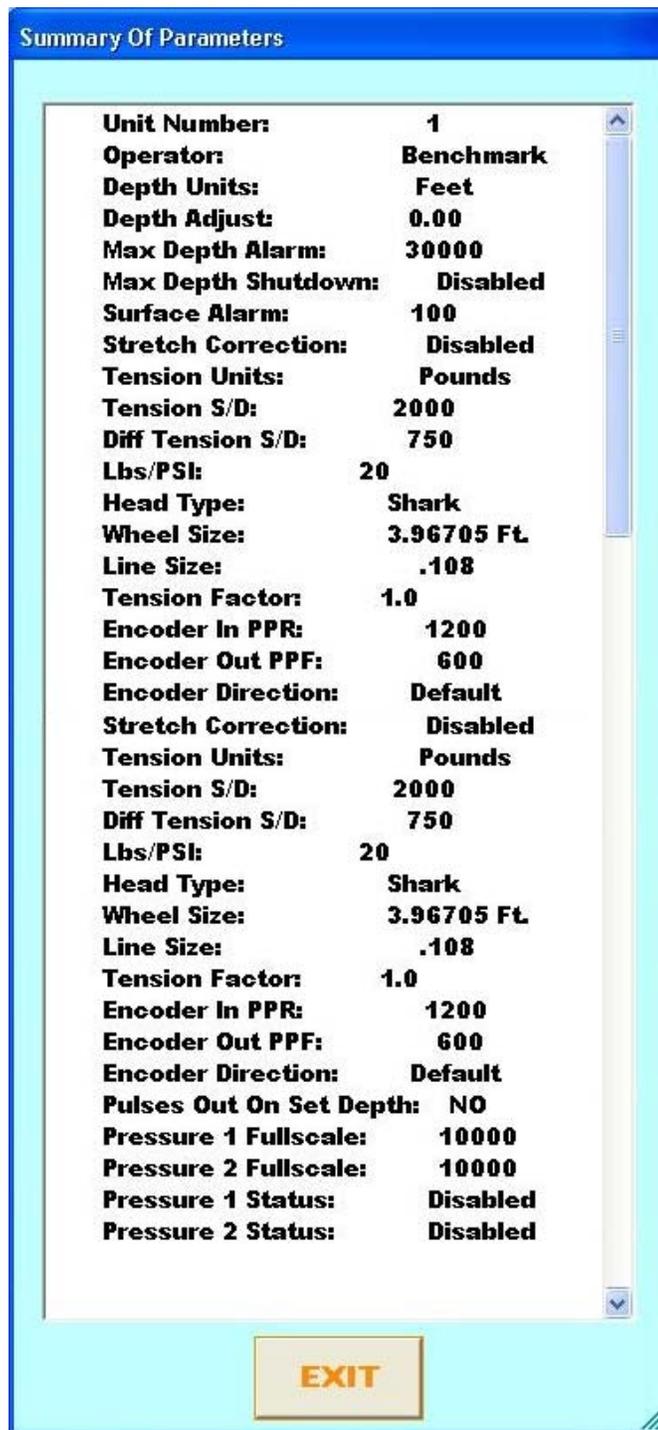

Differential tension provides a delta tension reading. The meter will slowly reset itself to 0 so the reset switch is not necessary.

3.1.17 RESTORE DEFAULTS

When this button is pressed, all the settings will be restored to their default values. This functions as a software reset. Depth will be zeroed.

3.1.18 SUMMARY

The Summary Menu is a quick reference to what parameters are set. This is a static display. All of the defaults are shown.

3.1.19 HELP MENU

The HELP button will display the four options displayed above.

3.1.19.1

ABOUT SCREEN

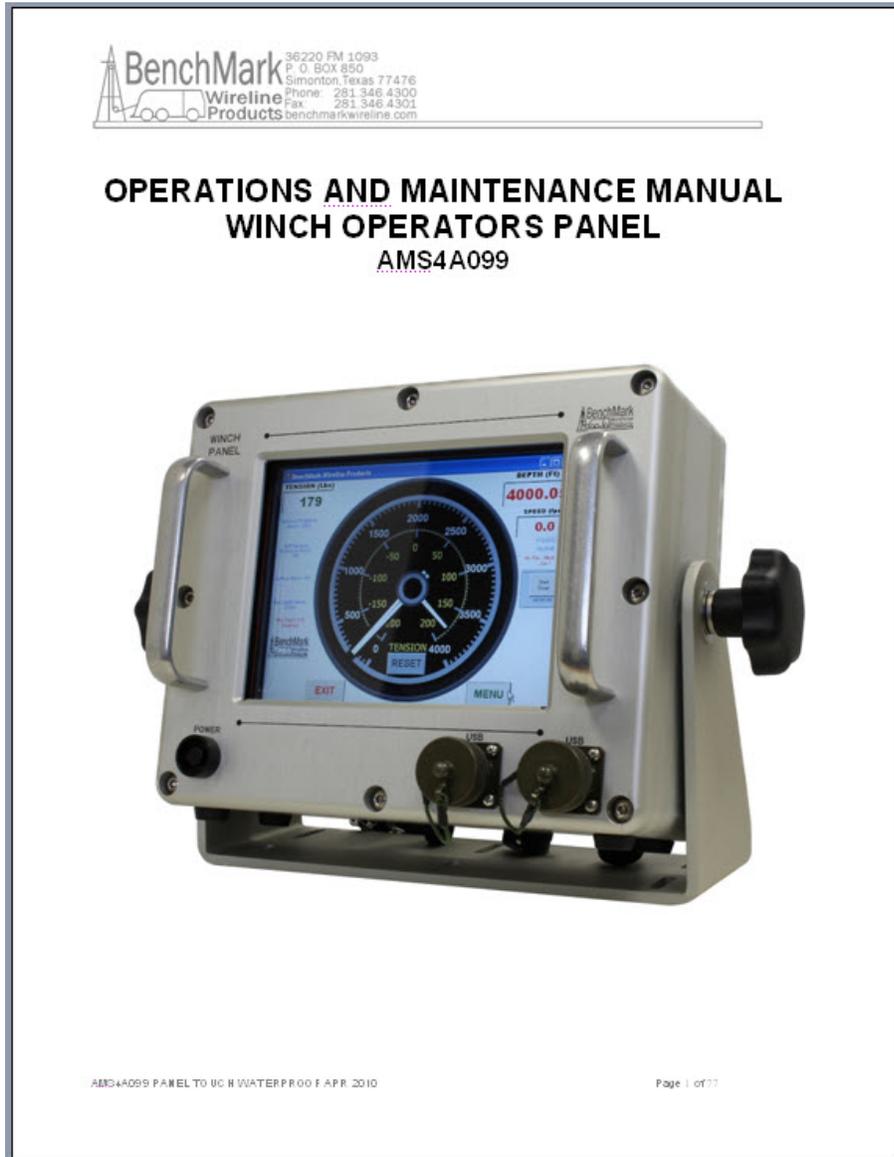

The ABOUT button displays the software revisions.

There are two programs that can be updated, the HOISTMAN program which is run by the PC and the ACQUISITION program that is run by the real time board.

3.1.19.2

HELP MANUAL

MANUAL button invokes the Adobe Acrobat Reader with c:\manual.pdf. It will bring up this manual in pdf format.

3.1.19.3

DRIVE SPACE

The screenshot shows a software interface window titled "Drive Space". It displays two rows of data for Drive C: "Total Size Drive C: In MegaBytes" with a value of 4024.09423828125, and "Free Space Drive C: In MegaBytes" with a value of 2173.25341796875. An "EXIT" button is located at the bottom center of the window.

Label	Value
Total Size Drive C: In MegaBytes	4024.09423828125
Free Space Drive C: In MegaBytes	2173.25341796875

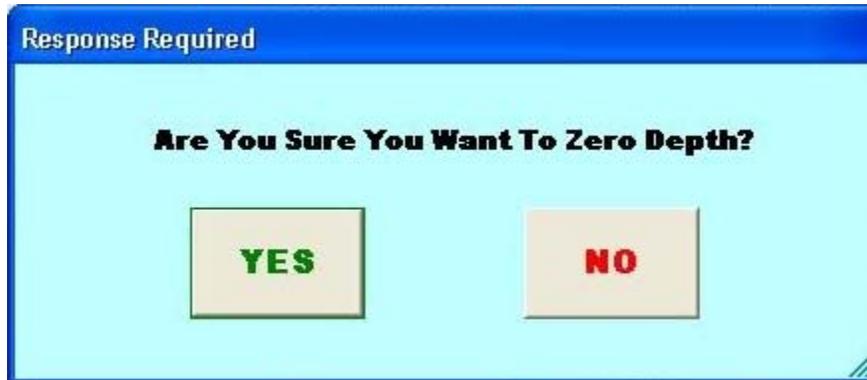

EXIT

3.1.20 SET DEPTH

The screenshot shows a 'Data Input' window with a light blue background. On the left, there are two input fields: 'Previous Value' containing '0.00' and 'Set Depth' which is empty. Below these is the text 'Range: -9999.9 -> 99999.8 Ft'. On the right is a numeric keypad with buttons for digits 1-9, 0, a decimal point, and a delete key labeled 'DEL'. At the bottom left are 'OK' and 'CANCEL' buttons, and a minus sign '-' button is located between the 'Set Depth' field and the keypad.

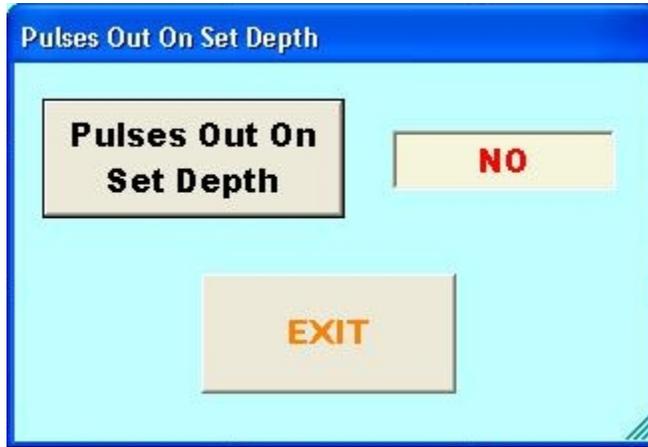

NOTE - A Set Depth command may send encoder pulses to the logging system. Refer to 3.1.22 - Pulses Out

3.1.21 ZERO DEPTH

NOTE - A Zone Depth command may send encoder pulses to the logging system. Refer to 3.1.22 - Pulses Out

3.1.22 PULSES OUT

NOTE - This menu determines whether encoder pulses are sent to the logging system when the operator performs a "set depth" or a "zero depth" action.

3.1.23 ENCODER OUTPUT PPF

The screenshot shows a software interface titled "Data Input". It features a light blue background. On the left side, there is a label "Previous Value" above a yellow input field containing the number "600". Below this is another label "Set Encoder Out PPF (1-600)" above an empty white input field. On the right side, there is a numeric keypad with buttons for digits 1 through 9, 0, a decimal point, and a "DEL" key. At the bottom left, there are three buttons: "OK" (green text), "CANCEL" (red text), and a hyphen "-" button.

This determines the encoder pulses out per foot and is independent of the encoder in pulses per revolution.

3.1.24 START TIME LOGPLOT

The LogPlot is a third-party plotting program that can be invoked from this menu. A time-stamp named file is automatically created in c:\logplotfiles\ subdirectory.

3.1.25 LOGPLOT HEADER INFO

LogPlot Header Info

Company:

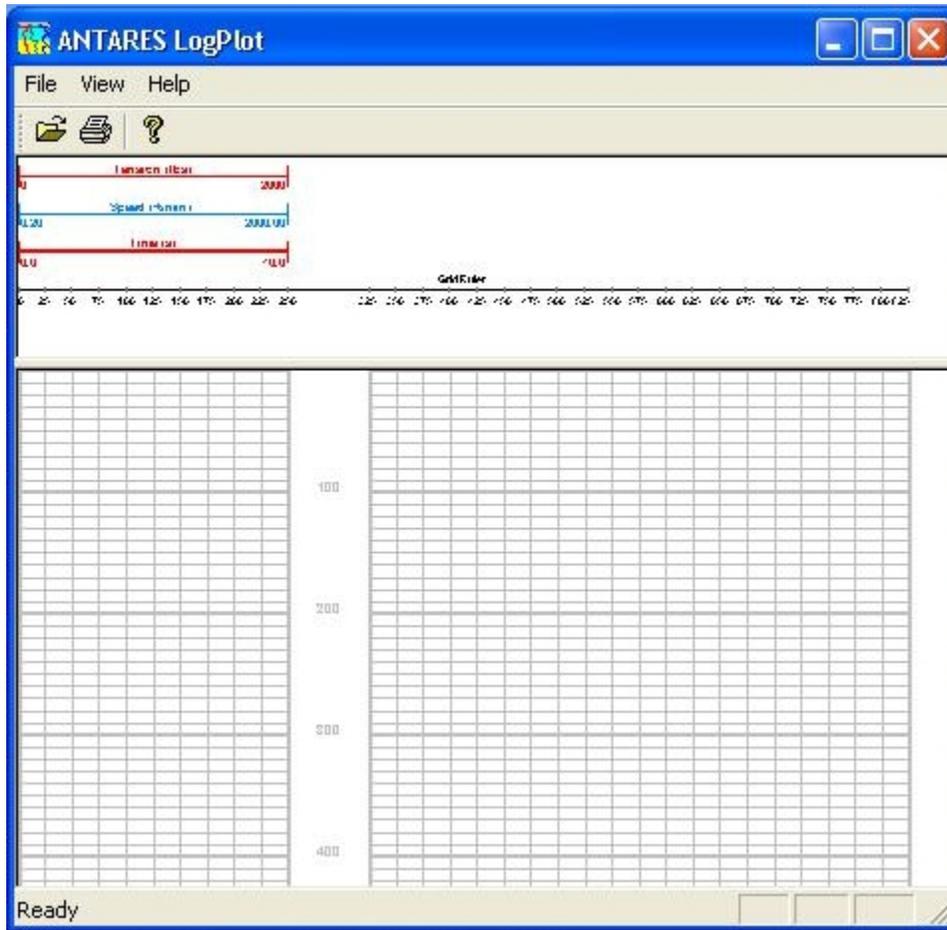

Well:

Remarks:

EXIT

The operator has the option of editing these three fields and this information is then included in the header of the LogPlot file.

3.1.26 LOGPLOT

NOTE - the Start Depth Logplot button is similar to the Start Time Logplot button except the Depth Logplot is depth driven and the Time Logplot is time driven

4.0 SOFTWARE UPDATE PROCEDURE

4.1 HOISTMAN PROGRAM UPDATE (PC BASED PROGRAM)

- 4.1.1 Close all running programs in Windows XP Embedded.
- 4.1.2 Copy Hoistman Display.EXE to the directory C:\Program Files\Kerr\ or the C:\Program Files\BenchMark\ directory. This depends on the location of the installation directory.
- 4.1.3 Shutdown Windows XP Embedded, and cycle power. When the Hoistman Display program comes up check the HELP – ABOUT menu and confirm that both software versions are at the latest revision.
- 4.1.4 Copy this file (manual.pdf) to C:\. This manual can then be evoked from the help menu.

4.2 REAL TIME BOARD PROGRAM UPDATE (AMS40 BOARD)

The following Instructions for programming the DS89C450 MicroController's internal Flash memory with the real-time data acquisition program.

NOTE: the rear panel screws need to be removed to gain access to the switches on the CPU piggy-back PCB.

- 4.2.1 Close all running programs in Windows XP Embedded.
- 4.2.2 Copy the file S99XXXX?.HEX to the root directory C:\

Transfer these files to the CompactFlash (C:\) root directory via Ethernet or USB connection using the Windows Explorer

Double click on the software update icon on the desktop screen of if no image exists, see 4.2.3.

- 4.2.3 Depending on your setup a Hyperterminal session may need to be opened manually. Use the following settings:
 - Serial Port: COM1
 - Baud Rate: 57600
 - Data Bits: 8
 - Parity: None
 - Stop Bits: 1
 - Flow Control: None

4.2.11 After the ROM Loader is finished programming the Flash and the MEMDISK program is complete set the switches on the piggy-back PCB as follows:

SW1 - position towards CPU

SW2 - position towards CPU

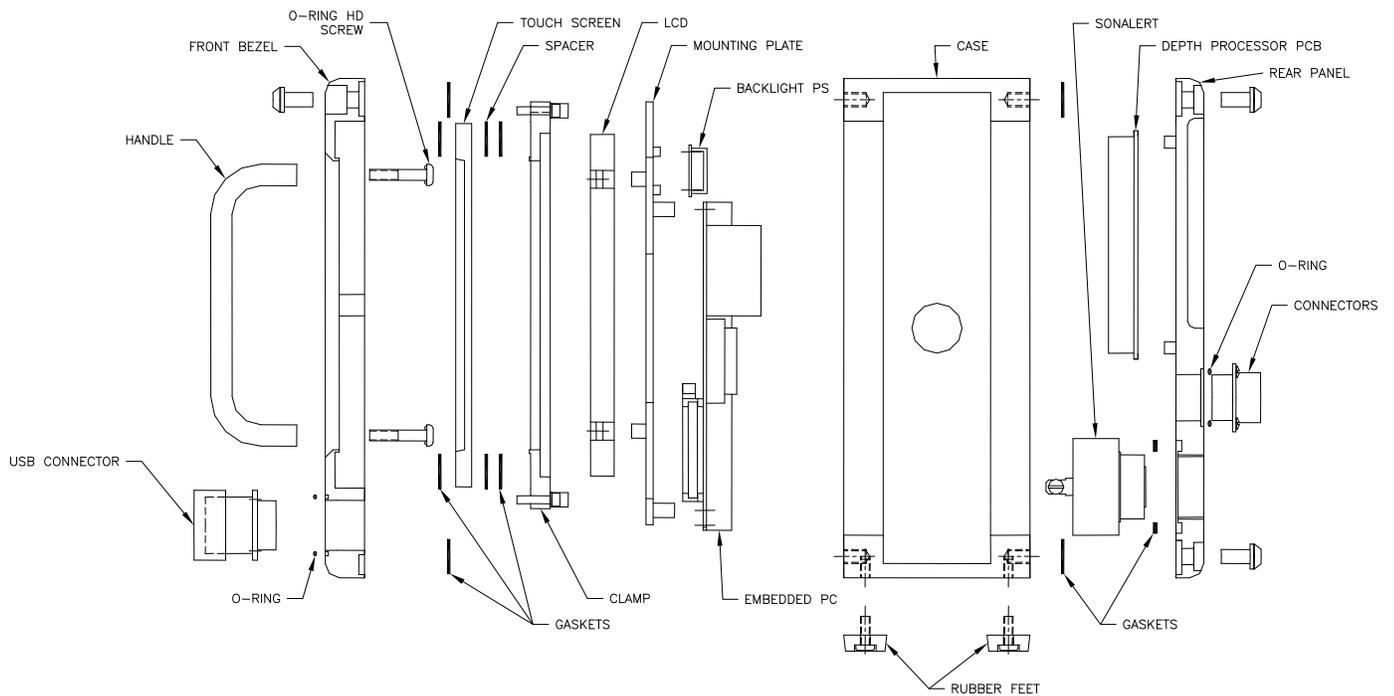

SW3 - position away from CPU

The real-time data acquisition program will start.

4.2.12 HyperTerm uses the same serial port as the Hoistman program, so close it before opening the Hoistman program. Always perform a – Restore Defaults – from the menu screen immediately after re-programming the acquisition board cpu flash.

CN8 - ADVANTECH PROCESSOR PCB						
FROM				TO		SIGNAL NAME
CN8 - 1		BLK	20	GND	GND BUS BAR	GND
CN8 - 4		BLK	20	GND	GND BUS BAR	GND
CN8 - 7		BLK	20	GND	GND BUS BAR	GND
CN8 - 8		BLK	20	GND	GND BUS BAR	GND
CN8 - 11		BLK	20	GND	GND BUS BAR	GND

CN2 - ADVANTECH PROCESSOR PCB USB						
FROM				TO		SIGNAL NAME
CN2 - 1	USE SMALL 10 PIN CONNECTOR	RED	22	J7 - 1	USB CONNECTOR ON THE FRONT PANEL	USB1 +5VDC
CN2 - 2	USE SMALL 10 PIN CONNECTOR	RED	22	J8 - 1	USB CONNECTOR ON THE FRONT PANEL RIGHT CORNER	USB1 +5VDC
CN2 - 3	USE SMALL 10 PIN CONNECTOR	WHT	22	J7 - 2	USB CONNECTOR ON THE FRONT PANEL	USB1 D0-
CN2 - 4	USE SMALL 10 PIN CONNECTOR	WHT	22	J8 - 2	USB CONNECTOR ON THE FRONT PANEL RIGHT CORNER	USB1 D0-
CN2 - 5	USE SMALL 10 PIN CONNECTOR	GRN	22	J7 - 3	USB CONNECTOR ON THE FRONT PANEL	USB1 D0+
CN2 - 6	USE SMALL 10 PIN CONNECTOR	GRN	22	J8 - 3	USB CONNECTOR ON THE FRONT PANEL RIGHT CORNER	USB1 D0+
CN2 - 7	USE SMALL 10 PIN CONNECTOR	BLK	22	J7 - 4	USB CONNECTOR ON THE FRONT PANEL	USB1 GND
CN2 - 8	USE SMALL 10 PIN CONNECTOR	BLK	22	J8 - 4	USB CONNECTOR ON THE FRONT PANEL RIGHT CORNER	USB A GND

CN3 - ADVANTECH PROCESSOR PCB USB							
FROM				TO		SIGNAL NAME	
CN3 - 1	USE SMALL 10 PIN CONNECTOR. INSERT A RED 22 AWG INTO CN3 - 1 AND SOLDER THE OTHER END TO PIN 1 OF THE PCB ON J5 CONNECTOR ON THE FRONT PANEL.	RED	22	J2 - 1	SOLDER TO PIN 1 OF THE PCB ON J2 CONNECTOR ON THE REAR PANEL.	USB3 +5VDC	
CN3 - 3	USE SMALL 10 PIN CONNECTOR. INSERT A WHT 22 AWG INTO USBA2 - 5 AND SOLDER THE OTHER END TO PIN 2 OF THE PCB ON J5 CONNECTOR ON THE FRONT PANEL.	WHT	22	J2 - 2	SOLDER TO PIN 2 OF THE PCB ON J2 CONNECTOR ON THE REAR PANEL.	USB3 D0-	
CN3 - 4	USE SMALL 10 PIN CONNECTOR. INSERT THE WHT WIRE OF THE TOUCH SCREEN CABLE INTO CN3 - 4	WHT	22		TO WHT WIRE OF TOUCH SCREEN CABLE.	USB4 D0-	
CN3 - 5	USE SMALL 10 PIN CONNECTOR. INSERT A GRN 22 AWG INTO USBA2 - 7 AND SOLDER THE OTHER END TO PIN 3 OF THE PCB ON J5 CONNECTOR ON THE FRONT PANEL.	GRN	22	J2 - 3	SOLDER TO PIN 3 OF THE PCB ON J5 CONNECTOR ON THE FRONT PANEL.	USB3 D0+	
CN3 - 6	USE SMALL 10 PIN CONNECTOR. INSERT THE GRN WIRE OF THE TOUCH SCREEN CABLE INTO CN3 - 6	GRN	22		TO GRN WIRE OF TOUCH SCREEN CABLE.	USB3 D0+	
CN3 - 7	USE SMALL 10 PIN CONNECTOR. INSERT A BLK 22 AWG INTO USBA2 - 9 AND SOLDER THE OTHER END TO PIN 4 OF THE PCB ON J5 CONNECTOR ON THE FRONT PANEL.	BLK	22	J2 - 4	SOLDER TO PIN 4 OF THE PCB ON J2 CONNECTOR ON THE REAR PANEL.	GND	

LCD1 CONNECTOR - ADVANTECH PROCESSOR PCB						
FROM				TO		SIGNAL NAME
LCD1	USE CABLE AMS4A374				LCD DISPLAY	

CN2 - 5VDC CCFL INVERTER PCB						
FROM				TO		SIGNAL NAME
CN2 - 1		WHT	22		CONNECT TO 2 PNK WIRES COMING FROM THE DISPLAY	DISPLAY POWER
CN2 - 4		WHT	22		CONNECT TO THE BLK WIRE COMING FROM THE DISPLAY	DISPLAY POWER GND

HDR3 - PRESSURE INPUT/OUTPUT PCB -- 12 PIN						
HDR3 - 1	SPLICE AT HDR3 ON PRESSURE INPUT/OUTPUT PCB	BLK	22	J4 - M	SIG OUT CONNECTOR ON THE REAR PANEL	4 - 20MA 1 LOOP GND
HDR3 - 2	SPLICE AT HDR3 ON PRESSURE INPUT/OUTPUT PCB	BLK	22	J4 - M	SIG OUT CONNECTOR ON THE REAR PANEL	4 - 20MA 2 LOOP GND
HDR3 - 3		ORN	22	J4 - K	SIG OUT CONNECTOR ON THE REAR PANEL	4 - 20MA LOOP 1
HDR3 - 4		GRN	22	J4 - L	SIG OUT CONNECTOR ON THE REAR PANEL	4 - 20MA LOOP 2

J1 - REAR PANEL CONNECTOR 12 - 24 VDC						
FROM				TO		SIGNAL NAME
J1 - B		BLK	20	GND	GND BUS BAR	GND

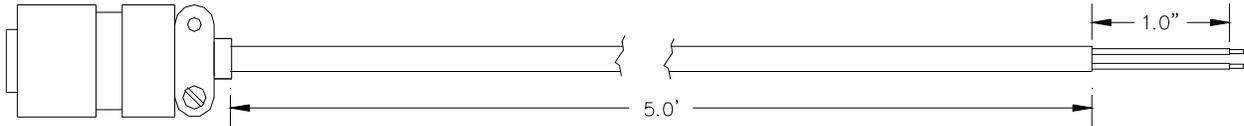

J4 - SIG OUT REAR PANEL						
FROM				TO		SIGNAL NAME
J4 - H		BLK	20	GND	GND BUS BAR	GND
J4 - J		BLK	20	GND	GND BUS BAR	GND

J5 - LOAD CELL REAR PANEL						
FROM				TO		SIGNAL NAME
J5 - J		BLK	22	GND	GND BUS BAR	SHIELD

J9 -ALARM CONNECTOR ON THE REAR PANEL						
FROM				TO		SIGNAL NAME
J9 - C		BLK	22	GND	GND BUS BAR	GND

7.0 CABLES

7.1 AMS4A827 CABLE ASSEMBLY – DC POWER IN

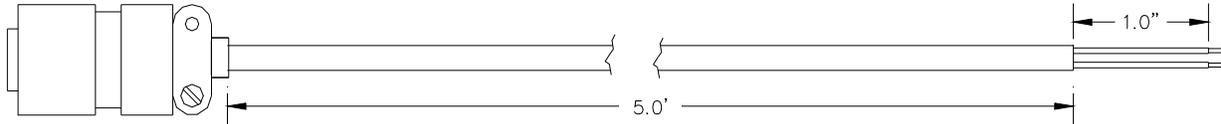

A – WHITE
 B – BLACK

A = +
 B = -

P/N	DESCRIPTION	QTY.	REF
AMS4P177	CONN KPSE06J12-3S STR PLUG SOCKET	1	
AMS7P061	CABLE 16-2 SJ CORD	25 feet	

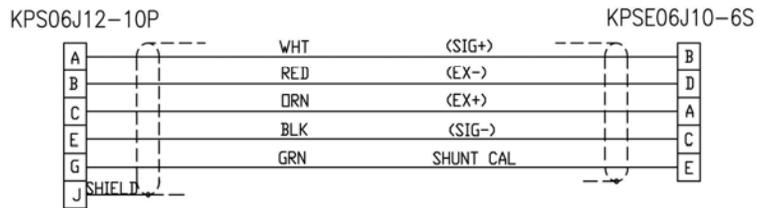

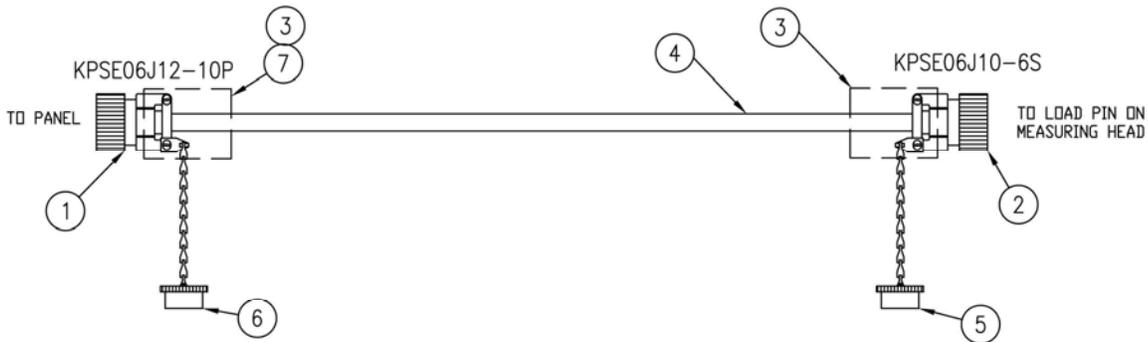

7.2 AMS4A826 CABLE ASSEMBLY – OVER TENSION SHUTDOWN

A – WHITE
 B – BLACK

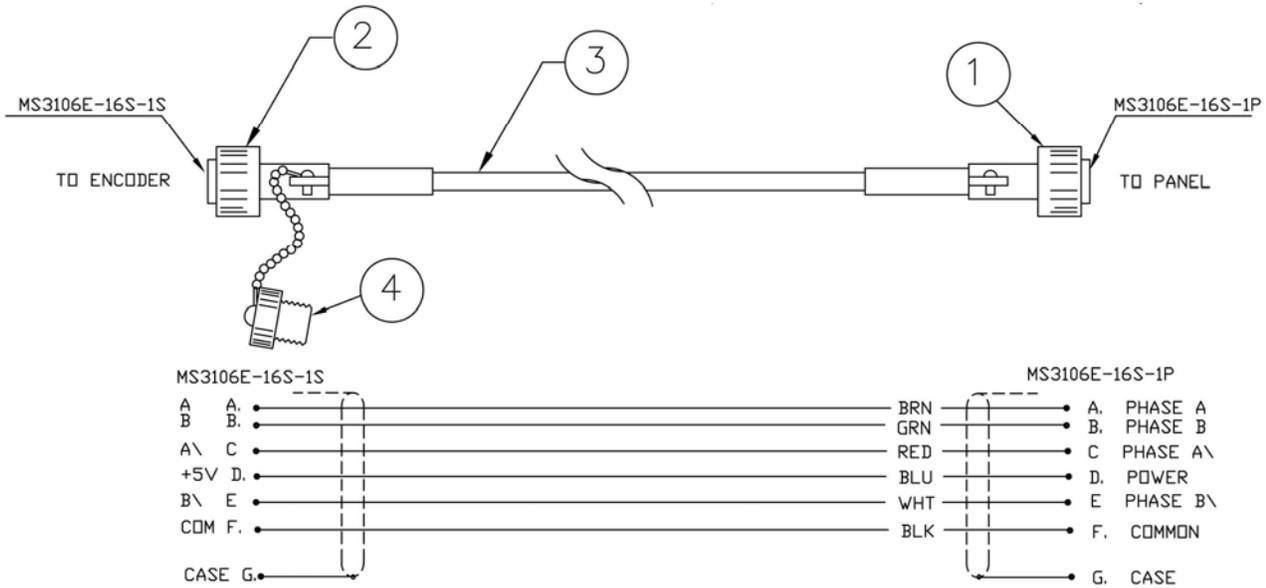

P/N	DESCRIPTION	QTY.	REF
AMS4P178	CONN KPSE06J12-3P STR PLUG PINS	1	
AMS7P061	CABLE 16-2 SJ CORD	30 feet	

7.3 ALS8A013 LOAD PIN IN CABLE

P/N	DESCRIPTION	QTY.	REF
AMS4P181	CONN KPSE06J12-10P	1	
AMS4P266	CONN KPSE06J10-6S	1	
AMS4P221	CABLE 20/8C ALPHA 25468 BLACK	30 feet	
AM5KP059	DUST CAP KPT8010C	1	
AM5KP070	DUST CAP KPT8012C	1	

7.4 AMS4A127 ENCODER IN CABLE

P/N	DESCRIPTION	QTY.	REF
AMS4P183	CONN MS3106F-16S-1P	1	
AMS4P184	CONN MS3106F-16S-1S	1	
AMS4P221	CABLE 20/8C ALPHA 25468 BLACK	30 feet	
AM5KP113	DUST CAP MS25042-16DA	1
